

# Late Model - Heads-Up

---

Late Model Heads-Up is an exciting class returning to the 2016 LS FEST. This class will feature the quickest Late Model LS, and LT powered cars in recent production. This class has been developed to give Late Model owners a place to showcase their cars and builds. The rules are simple but effective. Entry must run on 18 inch or greater diameter wheel and 245 mm or greater DOT tire. Your car must have come from the factory with at least 18 inch wheels and at least 245 mm rear tires. We look forward to everyone making the journey to LS FEST 2016 to see and or participate in this exciting class. This is an all run, qualified field with a touch of grudge action. The “qualifying sheet” will be used for two purposes. First, the bragging rights of being #1 Qualifier and second to determine a potential bye run, for first round of eliminations. A “PRO” style ladder will be used for eliminations until we are at 8 cars or less. From that point forward, when called to the lanes, all remaining 8 contestants will draw a numbered chip and return to their vehicle. The contestant that draws the number one chip will have first choice as to who he or she would like to race. #1 can choose to race #2, and then #3 would have next choice until all contestants remaining have been chosen. Each corresponding round going forward would employ the same process. When called, report to staging lanes, draw chips, chose your competitor. This will make for some very exciting on and off track action. Again the rules are simple.....The entry must have come from the factory with at least 18 inch (diameter) wheel and at least 245 mm tire. Tires and wheels may be replaced by any size combo and brand as long as the combo meets or exceeds 18 inch wheel and 245 mm tire. Tires must be DOT approved. No Slicks permitted.

Vehicles that are included in this exciting class are as follows...

5<sup>th</sup> GEN Camaros, CTSV, G 8, C5 and Up Corvettes, GXP, ZL 1 Camaro, etc.

– Any other Late Model GM vehicle must meet same type criteria as mentioned above.

The minimum accepted combo is 18 inch wheel and 245mm DOT tire.

¼ mile, .400 Pro Tree,
