

1970-1981 2nd Gen F-Body Delrin Control Arm Bushing Kit RK100-20

BUSHING INSTALLATION NOTES:

- Support the inside of the control arm with a piece of metal or wood while removing the factory bushings and installing the new Rekudo Delrin bushings. Failure to do so will result in the control arm collapsing on itself.
- Install the outer metal shell first, then press the Delrin insert into the shell, and followed by the inner metal sleeve. This will eliminate any chance of the Delrin cracking upon installation.
- Due to production variances, in some cases it may be necessary to install a thin washer between the LCA Delrin bushing and the vehicle frame. After installing the bushings, verify that the Delrin protrudes out past the metal lip of the control arm, as shown. If not, add a washer for clearance (**Figure 1**).
- There are several combinations of upper and lower control arm bushings that 2nd Gen F-bodies use, depending on the year. Measure your factory bushings, and consult the chart below to select the correct Delrin replacements to install:
