

**1970-1981 2nd Gen F-Body Lowering Spring Kit
RK200-11 & RK200-12**

NOTES:

- Factory springs are under a tremendous amount of tension. Improper removal or installation of springs can result in serious injury or death. **REKUDO lowering springs should only be installed by a qualified mechanic.**
- REKUDO springs are installed with the close coils facing down, and the REKUDO logo facing up.
- In order to achieve the correct ride height, the spring pigtail must be placed between the two drain holes in the lower control arm.
- After installation, it is critical to have the vehicle realigned as caster, camber, and toe will have changed with the new ride height.
