

QFT™ 230 & 260 FUEL PUMP REBUILD KITS P/N 30-7313QFT

To rebuild pumping assembly without motor shaft seal replacement:

- 1. Remove (4) assembly fasteners, mounting bracket, lower wear plate, rotor, o-ring, eccentric bushing, upper wear plate, and bypass valve assembly.
- 2. Disassemble the bypass valve and examine for debris and smooth movement of the piston.
- 3. Replace the internal and external O-rings.
- 4. Place the new upper wear plate in the pump body positioned around the existing alignment pin.
- 5. Install the eccentric bushing to position on the same alignment pin and against the upper wear plate.
- 6. Install the rotor on the shaft with the counter bore facing out.
- 7. Install the vanes into each slot in the rotor.
- 8. Install the new O-ring.
- 9. Position the new lower wear plate and torque the (4) screws to 20 -30 in./lbs.

To replace motor shaft seal:

- 1. Remove the pumping assembly by removing (x4) 10-32 screws on bottom of pump (#19). Slide components out
- 2. Remove (x2) motor screws and slide motor out. CAUTION! HOLD MOTOR END CAPS AGAINST MOTOR HOUSING DURING AND AFTER SEPARATION.
- 3. Remove old shaft seal with new replacement.
- 4. Reinstall motor, torque the (x2) screws to 10-13 in./lbs. Reinstall pumping assembly torque the (x4) screws to 20 -30 in./lbs.
